

TABLE 2. Comparison of the distribution of the number of species per site in the different habitats. The number of species per site was classified in four categories: 1, 2, 3, and 4 or more species per site. The total number of sites per habitat is given in parentheses. The results of the chi-square test are given in the last column

Habitat	1	2	3	4 or more	Total	Chi-square
Forest (24)	13	6	5	0	24	0.02
Open field (20)	10	5	5	0	20	0.01
Grassland (15)	10	5	0	0	15	0.00
Wetland (10)	7	3	0	0	10	0.00
Shrubland (10)	7	3	0	0	10	0.00
Open field + grassland (15)	10	5	0	0	15	0.00
Open field + shrubland (10)	7	3	0	0	10	0.00
Open field + wetland (10)	7	3	0	0	10	0.00
Open field + forest (10)	7	3	0	0	10	0.00
Open field + forest + shrubland (10)	7	3	0	0	10	0.00
Open field + forest + wetland (10)	7	3	0	0	10	0.00
Open field + forest + shrubland + wetland (10)	7	3	0	0	10	0.00

of the species richness and the number of species per site. The number of species per site was classified in four categories: 1, 2, 3, and 4 or more species per site.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.

The results of the chi-square test are given in the last column of Table 2. The distribution of the number of species per site is similar in all habitats.
